PDC.5 120mm PAW Series Replacement Dustcap

Instruction manual

For dustcap installation we recommend the use of flexible adhesive and the creation of a paper or tape template to use as a mask on the speaker cone. This prevents excess adhesive from contaminating the cone surface during installation. Ensure there is even coverage around the dustcap when fitting. We do not recommend the use of super glue, as it can discolour the product and/or speaker, is not flexible and sets too fast to allow precise installation.
